APS® remote control units from *g+m*... ensure the very highest operational reliability!
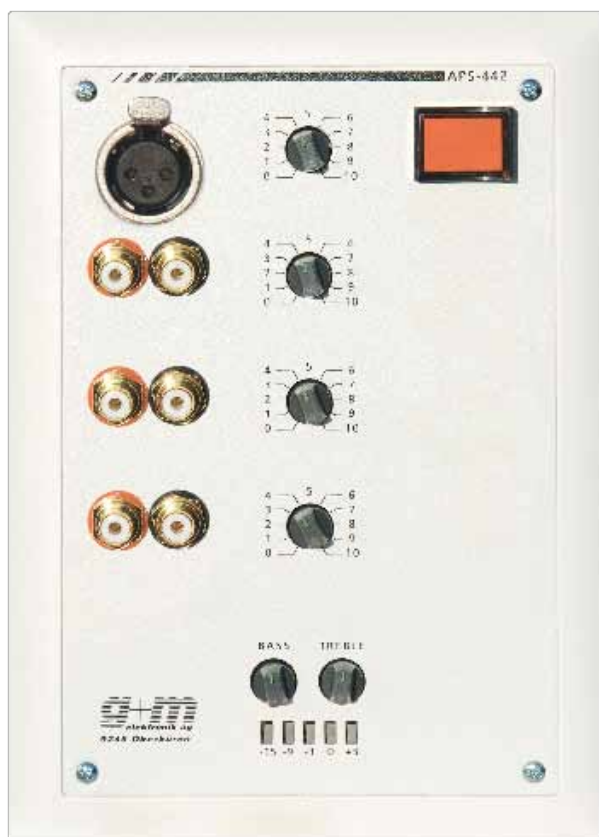

Any PA system is only as reliable as the ease and user-friendliness of its control system and remote-control! Access is provided only to the most important operating controls, and there is virtually no possibility of operating errors! Microphones and music devices are connected to the remote controls. Volume and tone can be controlled individually. The illuminated pushbutton is used to activate the PA system. Various programming options (phantom power supply and priorities etc.) are available.

APS-442-Edizio
148 x 208 mm Standard
